

COVID 19: Protect Yourself and Others

Follow lab safety procedures.

If you have symptoms, stay home and call your supervisor.

Stay six feet or two lab benches away from other people.

Use sign-up calendars or other communications to stagger work for social distancing.

Let others know when you will be working in the laboratory.

Keep lab surfaces clean with EPA-registered disinfectant.

Wash your hands thoroughly and often.

Wear a cloth mask to and from work. Wear the appropriate mask for the task in the lab or when social distancing cannot be implemented.
